

Map GRC Data With Accuracy at Light Speed

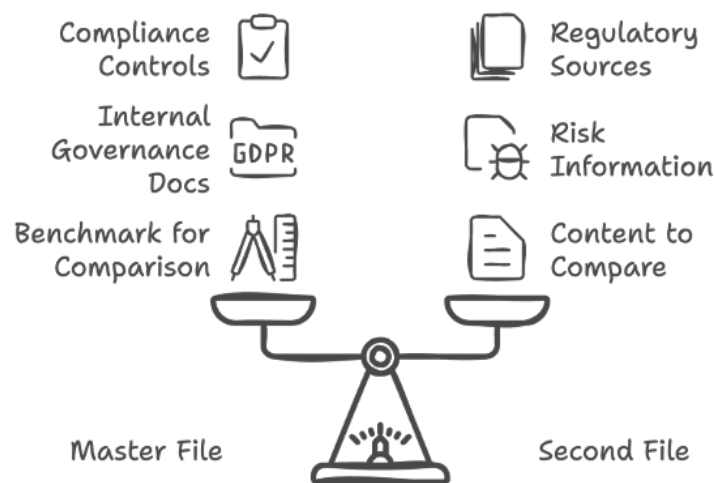

Verterim’s GRC Mapper is a **powerful AI tool designed to rapidly streamline the comparison of GRC data**, allowing users to analyze and contrast their GRC contents with remarkable efficiency. Traditionally, mapping is a highly manual exercise, but our AI-driven solution accelerates the process significantly.

Users can compare critical GRC data , including **internal governance documents (such as policies and standards)**, **risk-related information (like risk registers and threats)**, and **compliance controls (covering regulatory and authoritative sources)**. The GRC Mapper enables business users to manage their data with greater speed and accuracy than ever before.

- Rapidly compare two Excel spreadsheets to streamline GRC analysis
- Use the first file as the “master” benchmark for assessing the second file
- Map critical elements, including internal governance documents, risk information, and compliance controls
- Select specific spreadsheet columns for tailored comparisons, enhancing alignment and consistency
- Quickly identify potential matches and discrepancies

Speed, Accuracy, and Precision for Streamlined GRC Data Analysis

Comparing governance, risk, and compliance elements.
